Introduction

    Historical background

    Scope of the book

## **Chapter 1. Kinematical electron diffraction**

- 1.1 Electron wavelength
- 1.2 Plane wave representation of incident electron
- 1.3 Born approximation and single atom scattering
- 1.4 Fourier transformation
- 1.5 Scattering factor and charge density function
- 1.6 Single scattering theory
- 1.7 Reciprocal space and reciprocal lattice vector
- 1.8 Bragg's law and Ewald sphere
- 1.9 Abbe's imaging theory
- 1.10 Phase object approximation
- 1.11 Aberration and contrast transfer function

## **Part A: Diffraction of reflected electrons**

### **Chapter 2 Reflection high-energy electron diffraction**

- 2.1 Geometry of RHEED
- 2.2 Surface crystallography
  - 2.2.1 Surface reconstruction
  - 2.2.2 Two-dimensional reciprocal space

- 2.3 Streaks and Laue rings in RHEED
- 2.4 Determination of surface structures
- 2.5 RHEED oscillation and its application in MBE crystal growth
- 2.6 Kinematical diffraction theory of RHEED
- 2.7 Kikuchi pattern in RHEED

### **Chapter 3. Dynamical theories of RHEED**

- 3.1 Bloch wave theory
- 3.2 Parallel-to-surface multislice theories I
- 3.3 Parallel-to-surface multislice theories II
- 3.4 Perpendicular-to-surface multislice theory
  - 3.4.1 Multislice solution of Schrödinger equation for transmission electron diffraction
  - 3.4.2 Applications in RHEED calculations
- 3.5 Diffraction of disordered and stepped surfaces
  - 3.5.1 A perturbation theory
  - 3.5.2 Stepped surface

### **Chapter 4. Resonance reflections in RHEED**

- 4.1 Phenomenon
- 4.2 Resonance parabola and resonance condition
- 4.3 Width of resonance parabola
- 4.4 Kikuchi envelope
- 4.5 Dynamical calculations of resonance scattering
  - 4.5.1 Low incident angle resonance
  - 4.5.2 High incident angle resonance
  - 4.5.3 Resonance at stepped Surface
  - 4.5.4 Steady state wave at surface
- 4.6 Effect of valence excitation in resonance reflection
  - 4.6.1 A simplified theory
  - 4.6.2 Effect on surface resonance
- 4.7 Enhancement of inelastic scattering signals under resonance condition

## **Part B: Imaging of reflected electrons**

### **Chapter 5. Imaging surfaces in TEM**

- 5.1 Techniques for studying surfaces in TEM
  - 5.1.1 Imaging using surface-layer reflections
  - 5.1.2 Surface profile imaging
  - 5.1.3 REM of bulk crystal surface
- 5.2 Surface preparation techniques
- 5.3 Experimental technique of REM

- 5.3.1 Mounting specimens
- 5.3.2 Microscope pre-alignment
- 5.3.3 Forming REM images
- 5.3.4 Diffracting condition for REM imaging
- 5.3.5 Image recording techniques
- 5.4 Foreshortening effect
- 5.5 Surface refraction effect
- 5.6 Mirror-images in REM
- 5.7 Surface mis-cut angle and step height
- 5.8 Determining surface orientations
- 5.9 Determining step direction

## **Chapter 6. Contrast mechanisms of reflected electron imaging**

- 6.1 Phase contrast
- 6.2 Diffraction contrast
- 6.3 Spatial incoherence in REM imaging
- 6.4 Source coherence and surface sensitivity
- 6.5 Effect of energy filtering
- 6.6 Determining the nature of surface steps and dislocations
  - 6.6.1 Step height
  - 6.6.2 Down and up steps
- 6.7 REM image resolution
- 6.8 High resolution REM
  - 6.8.1 Imaging reconstructed layer
  - 6.8.2 Fourier image
- 6.9 Depth of field and depth of focus
- 6.10 Double images of surface steps
- 6.11 Surface contamination

## **Chapter 7. Applications of UHV REM**

- 7.1 UHV microscope and specimen cleaning
- 7.2 In-situ reconstruction on clean surfaces
- 7.3 Surface atom deposition and nucleation processes
- 7.4 Surface-gas reaction
- 7.5 Surface electromigration
- 7.6 Surface ion bombardment
- 7.7 Surface activation energy

## **Chapter 8. Applications of non-UHV REM**

- 8.1 Steps and dislocation on metal surfaces
- 8.2 Steps on semiconductor surfaces

- 8.3 Ceramics surfaces
- 8.4 In-situ dynamic processes on ceramics surfaces
- 8.5 Surface atomic termination and radiation damage
- 8.6 Reconstruction of ceramic surfaces
- 8.7 Imaging planar defects
- 8.8 As-grown and polished surfaces

## **Part C: Inelastic scattering and spectrometry of reflected electrons**

### **Chapter 9. Phonon scattering in RHEED**

- 9.1 Inelastic excitations in crystals
- 9.2 Phonon excitation
  - 9.2.1 Phonons
  - 9.2.2 Effect of atomic vibrations on crystal potential
  - 9.2.3 Electron-phonon interactions
- 9.3 "Frozen" lattice model
- 9.4 Calculation of Debye-Waller factor
- 9.5 Kinematical TDS scattering in RHEED
- 9.6 Dynamical TDS in RHEED
  - 9.6.1 Reciprocity theorem
  - 9.6.2 Fourier transform of Green's function
  - 9.6.3 Green's function theory
  - 9.6.4 A modified parallel-to-surface multislice theory

### **Chapter 10. Valence excitation in RHEED**

- 10.1 EELS spectra of bulk crystal surfaces
- 10.2 Dielectric response theory of valence excitations
- 10.3 Interface and surface excitations
  - 10.3.1 Classical energy-loss theory
  - 10.3.2 Localization effect in surface excitation
- 10.4 Average number of plasmon excitations in RHEED
- 10.5 Excitation of a sandwich layer
- 10.6 Dielectric response theory with relativistic correction
  - 10.6.1 Maxwell's equations
  - 10.6.2 Valence excitation near an interface
  - 10.6.3 Transverse force on incident electron
  - 10.6.4 Calculation of REELS spectra
- 10.7 Quantum theory of valence excitation
  - 10.7.1 Quantum mechanical basis of classical theory
  - 10.7.2 Density operator and dielectric response theory
- 10.8 Determination of surface phases

- 10.9 Multiple scattering effect
- 10.9.1 Poisson's distribution law
- 10.9.2 Measurement of electron penetration depth
- 10.9.3 Measurement of electron mean traveling distance along surface

### **Chapter 11. Atomic inner-shell excitations in RHEED**

- 11.1 Excitation of atomic inner shell electrons
- 11.2 Atomic inner shell excitation in reflection mode
- 11.3 Surface ELNES
- 11.4 Surface EXELFS
- 11.5 Surface chemical microanalysis
- 11.6 Effect of strong Bragg beams
- 11.7 Resonance and channeling effects
- 11.8 Effective ionization cross-section
- 11.9 Impurity segregation at surfaces
- 11.10 Oxygen adsorption on surface
- 11.11 REELS in MBE

### **Chapter 12. Novel techniques associated with reflection electron imaging**

- 12.1 Scanning reflection electron microscopy
  - 12.1.1 Imaging surface steps
  - 12.1.2 Imaging dislocations
- 12.2 Secondary electron imaging of surfaces
- 12.3 EDS in RHEED geometry
- 12.4 Electron holography of surfaces
  - 12.4.1 Principle and theory
  - 12.4.2 Surface holography
- 12.5 REM-STM
  - 12.5.1 Atomic resolution STM image
  - 12.5.2 Artifacts in STM imaging
- 12.6 Time-resolved REM and REM-PEEM
- 12.7 Total-reflection x-ray spectroscopy in RHEED
- 12.8 Surface wave excitation Auger electron spectroscopy
- 12.9 LEED and LEEM

**Appendix A: Physical constants, electron wavelengths and wave numbers**

**Appendix B: Crystal inner potential and atomic scattering factor**

**Appendix C.1: Crystallographic structure systems**

**Appendix C.2: FORTRAN program for calculating crystallographic data**

**Appendix D: Electron diffraction patterns of several types of crystal structures**

**Appendix E: FORTRAN programs**

- E.1 Single-loss spectra of a thin crystal slab in TEM
- E.2 Single-loss REELS spectra in RHEED
- E.3 Single-loss spectra of parallel-to-surface incident beam
- E.4 Single-loss spectra of interface excitation in TEM

**Appendix F: Bibliography of REM, SREM and REELS**
